

Phase 2: Release v1.0 Configuration Record

Project Name: RecipeVault
Release ID: v1.0
Phase: Release & Baseline Update
State: Basic Working System
Date: December 30, 2025

1. Release Overview

Release **v1.0** represents the first stable and functional version of the RecipeVault system. This release delivers the core features required for system operation and serves as the reference release for subsequent enhancements.

Included Features

- User Login
- Dashboard
- Add Recipe
- Edit Recipe
- Delete Recipe

2. Git Versioning

- **Git Tag:** `v1.0`
- **Release Type:** Initial Stable Release
- **Release Method:** GitHub Releases (UI)

3. /docs Folder Updates

The following configuration documentation has been updated as part of this release:

Updated Configuration Items

Item Name	Path	Previous Version	Updated Version	Notes
-----------	------	------------------	-----------------	-------

CI Register	/docs/CI_Register.xlsx	Planned	1.0	Updated CI status for released files
-------------	--	---------	------------	--------------------------------------

CI Register Update Details

The following source files were updated in the CI Register:

- [index.html](#)
- [login.html](#)
- [admin.html](#)
- [dashboard.html](#)
- [main.js](#)

All listed items have their status changed from **Planned** to **Version 1.0**.

4. /releases Folder Content

The following artifacts define the v1.0 release documentation:

Required

- **Release_Notes_v1.0.txt**

Content:

Release 1.0: Initial working version. Includes Login, Dashboard, and Add/Edit/Delete recipe functionality.

Optional

- **Source_Code_v1.0.zip**
Note: The official source code archive should be uploaded via the **GitHub Releases UI**. Including the release notes file in the [/releases](#) directory satisfies the project folder structure requirement.

5. Baseline Status

This release establishes the **Functional Baseline v1.0** for RecipeVault. All configuration items listed above are considered **frozen** under this release tag.

Any modification to released artifacts must be handled through a formal **Change Request (CR)** process.

6. Approval

Configuration Manager: Emnet Teshome

Status: APPROVED / RELEASED

Baseline Reference: BL1 → Release v1.0
